Jakarta, Indonesia | Open to remote roles

SUMMARY

Junior Software Engineer with 1.5 years of production experience building and maintaining .NET and C# web applications that support daily school operations at BINUS. Cut a critical data process from over 30 minutes to under 10 seconds through query optimization and efficient data structures. Computer Science student (GPA 3.75) experienced in Agile delivery, SQL, and full-stack development with JavaScript, React, and Next.js.

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, SQL, C, C++, HTML5, CSS3

Frameworks: .NET, ASP.NET Core, Razor Pages, React, Next.js, Node.js

Libraries & Tools: LINQ, Bootstrap, Tailwind CSS, shadcn/ui, Git, Azure DevOps

Practices: Agile, RESTful APIs, Microservices, Performance Optimization, Code Review

PROFESSIONAL EXPERIENCE

Junior Software Engineer

Mar 2026 – Present

Bina Nusantara IT Division (Binus School Team)

Indonesia

- Develop and maintain finance and operational systems that support internal business processes and daily school operations across Binus School.
- Enhance production-grade internal web applications using .NET and C#, improving system reliability and usability for non-technical stakeholders.
- Troubleshoot and resolve production issues in a live environment, collaborating with cross-functional teams to keep operational workflows running.
- *Tech Stack:* .NET, C#, ASP.NET Core Razor Pages, LINQ, JavaScript, SQL, Bootstrap, Azure DevOps

Full-Stack Developer Intern (Associate Member Program)

Mar 2025 – Feb 2026

Bina Nusantara IT Division (Binus School Team)

Indonesia

- Redesigned the Copy Score system, cutting execution time from over 30 minutes to under 10 seconds (~99% faster) by batching large queries and using dictionary-based lookups for constant-time data access.
- Designed and implemented score entry workflows with status tracking (Submitted, Unsubmitted, Upcoming, Pending, In Progress), improving teacher productivity by approximately 40%.
- Built and deployed a cloud-based notification and email service for student absence handling using .NET and Azure DevOps, now actively used in production.
- Maintained production web systems for academic scoring used daily by teachers and educational staff across Binus School.
- Diagnosed and resolved data consistency issues in relational data models with complex many-to-many mappings, working alongside senior engineers.
- Delivered features in Agile sprints, contributing to sprint planning, estimation, and peer code reviews in a shared codebase.
- *Tech Stack:* .NET, C#, ASP.NET Core Razor Pages, LINQ, JavaScript, SQL, Bootstrap, Azure DevOps

PROJECTS

ScoutUp AI

[Link](#)

Python · YOLO · Pose Estimation · REST API · Computer Vision

- Computer vision system that analyses football drill videos to measure player performance and generate structured assessment scores for coaches and scouts.
- Built an end-to-end computer vision pipeline that converts football drill videos into structured performance metrics and a 0–100 execution score, using pose-derived features and drill-specific video analysis.
- Designed a human-in-the-loop camera calibration system with reusable geometry presets, perspective transformation, resolution-aware coordinate scaling, and validation checks to prevent silent measurement errors.
- Implemented asynchronous video inference and partial-result handling, allowing multiple drills to be processed independently while explicitly rejecting unreliable measurements instead of generating fabricated results; GPU inference runs at approximately 2x real-time.

EDUCATION

Bina Nusantara University (BINUS)

2024 – 2028 (Expected)

Bachelor of Engineering in Computer Science (Global Class)

Indonesia

- GPA: 3.75 / 4.00
